

I chose Data Analytics as my major because I am very passionate about utilizing data to understand patterns, solve problems and promote meaningful decision making. My skills within this field have been strengthened through both my academic experiences and hands-on work with data. By working on certificates such as the Google Professional Data Analytics Certificate and maintaining a 3.9 GPA within my coursework at the University, I have developed a strong foundation in data analysis, visualization, and statistical thinking. I am specifically drawn to how datasets can uncover patterns and inform decisions across industries, from business strategy to healthcare innovation. My experiences outside the classroom have further reinforced my decision to pursue data analytics as a career. As an Information Technology Student Assistant at Ohio State, I analyze and resolve technical issues while working with systems such as ServiceNow and Jira, where I identify inefficiencies and contribute to improving workflows. Additionally, as a Software Developer for SmileChild, I have worked on a maternal health mobile application in collaboration with Nationwide Children's Hospital and the OSU Wexner Medical Center. In this role, I have helped build backend infrastructure and develop predictive, user-focused features, demonstrating how data can directly support better health outcomes. These experiences have shown me the real-world value of data-driven decision-making and strengthened my passion and commitment to this field.

Receiving the VEAAM scholarship would benefit me by allowing me to further shift my focus on my academic and professional development. The financial support would reduce the burden of educational expenses, enabling me to dedicate more time to advancing my technical skills and pursuing opportunities such as internships, research, and competitions. I have already applied my skills within competitive settings, earning third place in consecutive DATA I/O competitions, where I analyzed datasets such as NYC housing prices and electric vehicle adoption trends using tools like Python, SQL, pandas, and Tableau. With this scholarship, I intend to pursue further research in machine learning and take on advanced leadership roles within the data community at Ohio State, ensuring that my focus remains on academic excellence and skill acquisition rather than financial constraints.

In the long term I would like to pursue a career in roles such as a data analyst, data scientist, or machine learning engineer where I can apply both statistical theory and computational methods to solve real-world problems. I am also planning on pursuing a Masters degree in Data Analytics after I complete my bachelors and work for a few years within the industry as I believe it will greatly propel my future within the career. The OSU Data Analytics Program will help me achieve these goals as it will build proficiency in skills such as Python, R, Tableau, Power BI etc. Through the program's partnership with the industry through career fairs, research opportunities, hackathons such as DATA I/O, and student organizations like the Big Data and Analytics Association, I will be able to create a strong network with peers, faculty and alumni that will greatly support both my academic growth and career development. As I would also like to pursue a Master's degree I believe the program will also put me in a great position to achieve these endeavors as it will provide me with the proper fundamentals and lay the groundwork which I can utilize in future courses and on the job. From completing a few major courses at OSU such as CSE 3241 and CSE 2231 I have already gained a great deal of computational and mathematical skills that will allow me to become a better Data Analyst. I hope that in being enrolled into the program I can further build my skills as a data-driven problem solver and enjoy a long-lasting career in Data Analytics.

Overall, I am truly committed to growing as a data analytics professional and using my skills to create a positive impact in the world. This scholarship would provide both the financial support and motivation needed to continue pursuing my goals and maximizing the opportunities available to me at Ohio State.
